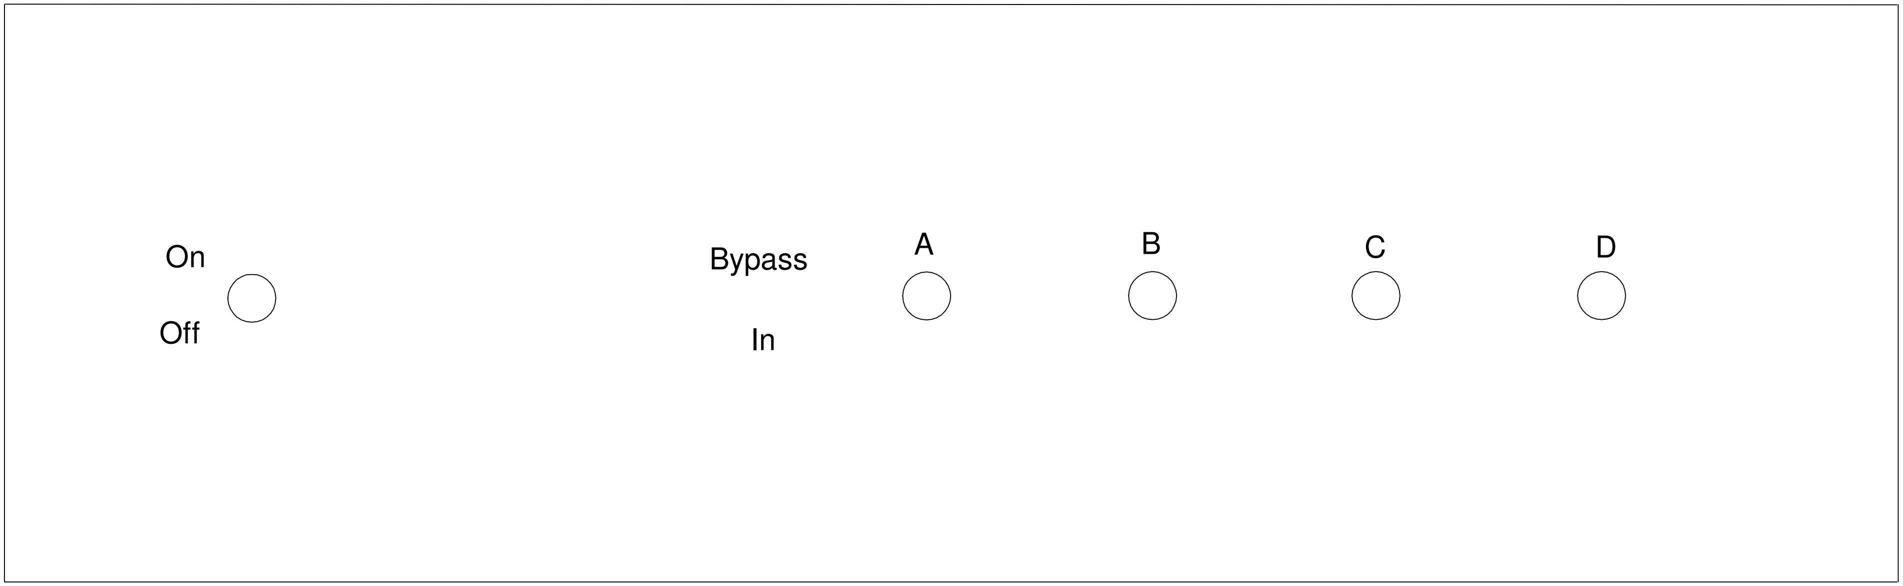
Therometer Box: Front Panel



Bypass: When the switch is "Bypass", then the resistor is having current sent through it. The switch for this resistor is open.

In: When the switch is "In", then the resistor is <u>not</u> having current sent through it. The switch for this resistor is open.

On/Off: This is the power switch. When the switch is "On", the circuit is closed. When the switch is "Off", the circuit is open.
